Using new data from the UK’s largest ever social survey, Understanding Society, PFRC and ILC-UK have uncovered startling preliminary findings about the ‘oldest old’ (aged over 85) and their levels of participation, wellbeing and health.

This new analysis, published as part of ESRC SDAI funded initiative is part of a major project exploring the financial dimensions of wellbeing and wider quality of life measures in older age.

PFRC and ILC-UK plan to extend analysis of Understanding Society to look at the financial wellbeing of the oldest old.

GOING OUT

In the previous 12 months, within the oldest old group;

- **24%** had visited a library
- **16%** went to the theatre
- **13%** visited a museum or gallery
- **10%** had been to the cinema
**HEALTH**

**AROUND**

1/3 over 85s said they were at least partly dissatisfied with their health

**OVER**

3/4 of the oldest old felt that their health limited even moderate activities

**ABOUT**

1/2 felt that pain had interfered with their activities over the past few weeks

**FAMILY TIES**

8 OUT OF 10 felt they could rely on family a lot

1 IN 10 reported not having any friends

**LIFE SATISFACTION**

26% over 85s reported being at least somewhat dissatisfied with their life overall

Just under 3/4 of the oldest old were at least somewhat satisfied with their lives
UK CENTENARIANS

In 2011, ILC-UK published ‘Living Beyond 100’: A report on centenarians.

Unless otherwise noted, the following data is taken from this report where it is fully referenced.

DOWNLOAD HERE
http://www.ilcuk.org.uk/index.php/publications/publication_details/living_beyond_100_a_report_on_centenarians

A GROWING POPULATION

Number of people currently alive who can expect to see their 100th birthday, by age in 2010

PROJECTED NUMBER OF UK CENTENARIANS

The majority of the oldest old are female and a higher concentration live in Southern England. Lower proportions live in urban areas and Northern Ireland.

85 year olds or older faced some kind of social exclusion - ILC-UK found in an analysis of the English Longitudinal Study of Ageing in 2012.

Source: ILC-UK (2012) Is Social Exclusion still important for Older People?

Quality of life among the oldest old decreases on average with age and the oldest old (aged 85 and over) are, as a group, at greater risk of poverty than younger older people (aged 65-85).

Of the oldest old perceive themselves as being in poor health. A substantial number of centenarians remain physically healthy and cognitively intact into the last years of their lives.
Substantial numbers of centenarians and nonagenarians continue to live independently in the community, either alone or with family members. **Four in ten very old men and seven out of ten very old women live alone.**

**ECONOMIC DISADVANTAGES**

Sixty percent of over 90s report difficulties shopping for groceries, almost a quarter report difficulties making telephone calls, and **35% report difficulties managing money.**

**FOR FURTHER INFORMATION**
